**FOR IMMEDIATE RELEASE:** Date, June 2004

### EP-TeQ – new Partner in Electronic Production TeQnologies

Aarhus, Denmark, June 2004, EP-TeQ ApS, the new Partner in consulting, sales, service and support of equipment for Electronic Production and Quality Assurance in the Nordic Countries, today announced that they have started their operations.

EP-TeQ ApS builds on many years of experience with Electronic Production TeQnologies and Quality assurance, and spelling TeQnologies with a Q is to indicate their focus on Quality. "Good business for everyone" is in their opinion the only way to do long-term business. The main task of EP-TeQ is to make business into a positive experience for both customers and suppliers.

EP-TeQ has employed people with experience in working with the Nordic companies in Electronic Production in the area of Production TeQnologies including inspection, test and quality systems. It is essential to them to understand the needs and requests of their customers in order to find the optimum solution.

"Every project will be evaluated to make sure that we can offer the optimum solution", says Knud Vester, one of the founders of EP-TeQ, "we want to be known in the business as the company who delivers the best possible solution at the required delivery time and ready for production".

"At EP-TeQ we are not focused on selling a specific product but rather on helping our customers solving their challenges in Electronic Production" says Lars Kongsted-Jensen, the other founder, "we often see customers looking for a specific type of equipment, but end up with a more efficient or easier solution with a different angle to the same challenge. Especially when talking about Quality Assurance, there is a lot of ways to achieve the same goal, but at very different costs".

### About EP-TeQ ApS

To EP-TeQ it is important to understand the customer's situation and needs, be part of defining the task in order to assure on-time implementation and evaluate actual performance versus specification after implementation. The job is, of course, not done until EP-TeQ and their suppliers have ensured an optimum operation in the running production.

EP-TeQ is not "just" about the sale of total solutions for Electronic Production. The consultants of EP-TeQ can also be hired to evaluate the optimum solution/supplier/TeQnology combination without having to purchase machinery from them.

Newly founded, EP-TeQ ApS are still looking for partners but have already made agreements with several suppliers of products. The development can be followed at <http://www.ep-teq.com>
