

## Inertec appoints EP-TeQ as their Distributor of Selective Soldering in the Benelux Area

Stilling, 10 May 2019

EP-TeQ has extended its contract with Inertec Löttechnik GmbH to include the sales and distribution of their selective soldering systems in the Benelux area. EP-TeQ has for many years been selling Inertec systems in the Nordic and Baltic area to well-reputed manufacturers of complex electronic hardware.

*'It is with great pleasure that we now have the possibility of helping Inertec with distributing their systems in the Benelux area as well, says Morten Lorenzen, Director of EP-TeQ bvba. 'Inertec has with their new CUBE.460 and CUBE.Inline competitive and small footprint machines with a big variety of possibilities, i.e. Miniwaves, Tin activated nozzles, ActiveFlow stamp. Furthermore, the CUBE.Inline's modular structure makes it possible to expand the machine after purchase, onsite at the customer'.*

With more than 1300 installed soldering systems, Inertec is one of the leading companies in this market sector. Right from the start, their focus has been on the development and production of innovative soldering technologies. The corporate guiding principle was and still is the company's ability to react flexibly to the wishes and requirements of the user and to continue to develop innovative products. Inertec was founded in 1992 by Ernst Hohnerlein, one of the original founders of SEHO (Seitz/Hohnerlein). The company is headquartered in Kreuzwertheim and employs approx. 50 people. It is acting worldwide with more than 20 representatives in Europe, America, Australia, Asia, South Africa and Israel.

**EP-TeQ A/S** has a unique combination of know-how, tools and machines for all electronics processes - Design, Production and Quality Assurance, enabling us to assist you throughout your investment process: Before - by working with you on the requirement specification and configuration. During - by helping you select the required tools/machines and training. After - by providing you with service and support in order to ensure optimum quality and reliability of your production.
